

Assembly of formwork for pillar using Wall/ Pillar screen.

oval pillar with heavy range wall screens and heavy range round formwork

SCREEN FOR PILLAR WALL

These have a series of holes which can be used to combine 600 and 1000 mm screens to construct concrete pillars from 250 mm to any multiple of 50 mm (the 600 screen gives us 250-450 mm, while the 1.000 screen gives us 500-850 mm). The joint is made using a pillar hook, Dywidag bar and 95 mm pad nut (see detail).

These screens are fully compatible with the Heavy Range for wall construction.
